Reading Practice Set 1: Passage and Questions

Directions: Read the passage. Then answer the questions. Give yourself 20 minutes to complete this practice set.

RUNNING WATER ON MARS?

1 Photographic evidence suggests that liquid water once existed in great quantity on the surface of Mars. Two types of flow features are seen: runoff channels and outflow channels. Runoff channels are found in the southern highlands. These flow features are extensive systems—sometimes hundreds of kilometers in total length—of interconnecting, twisting channels that seem to merge into larger, wider channels. They bear a strong resemblance to river systems on Earth, and geologists think that they are dried-up beds of long-gone rivers that once carried rainfall on Mars from the mountains down into the valleys. Runoff channels on Mars speak of a time 4 billion years ago (the age of the Martian highlands), when the atmosphere was thicker, the surface warmer, and liquid water widespread.

2 Outflow channels are probably relics of catastrophic flooding on Mars long ago. They appear only in equatorial regions and generally do not form extensive interconnected networks. Instead, they are probably the paths taken by huge volumes of water draining from the southern highlands into the northern plains. The onrushing water arising from these flash floods likely also formed the odd teardrop-shaped "islands" (resembling the miniature versions seen in the wet sand of our beaches at low tide) that have been found on the plains close to the ends of the outflow channels. Judging from the width and depth of the channels, the flow rates must have been truly enormous—perhaps as much as a hundred times greater than the 105 tons per second carried by the great Amazon river. Flooding shaped the outflow channels approximately 3 billion years ago, about the same time as the northern volcanic plains formed.

3 Some scientists speculate that Mars may have enjoyed an extended early period during which rivers, lakes, and perhaps even oceans adorned its surface. A 2003 Mars Global Surveyor image shows what mission specialists think may be a delta—a fan-shaped network of channels and sediments where a river once flowed into a larger body of water, in this case a lake filling a crater in the southern highlands. Other researchers go even further, suggesting that the data provide evidence for large open expanses of water on the early Martian surface. A computer-generated view of the Martian north polar region shows the extent of what may have been an ancient ocean covering much of the northern lowlands. The Hellas Basin, which measures some 3,000 kilometers across and has a floor that lies nearly 9 kilometers below the basin's rim, is another candidate for an ancient Martian sea.

4 These ideas remain controversial. Proponents point to features such as the terraced "beaches" shown in one image, which could conceivably have been left behind as a lake or ocean evaporated and the shoreline receded. But detractors maintain that the terraces could also have been created by geological activity, perhaps related to the geologic forces that depressed the Northern Hemisphere far below the level of the south, in which case they have nothing whatever to do with Martian water. Furthermore, Mars Global Surveyor data released in 2003 seem to indicate that the Martian surface contains too few carbonate rock layers—layers containing compounds of carbon and oxygen—that should have been formed in abundance in an ancient ocean. Their absence supports the picture of a cold, dry Mars that never experienced the extended mild period required to form lakes and oceans. However, more recent data imply that at least some parts of the planet did in fact experience long periods in the past during which liquid water existed on the surface.

5 Aside from some small-scale gullies (channels) found since 2000, which are inconclusive, astronomers have no direct evidence for liquid water anywhere on the surface of Mars today, and the amount of water vapor in the Martian atmosphere is tiny. Yet even setting aside the unproven hints of ancient oceans, the extent of the outflow channels suggests that a huge total volume of water existed on Mars in the past. Where did all the water go? The answer may be that virtually all the water on Mars is now locked in the permafrost layer under the surface, with more contained in the planet's polar caps.

iBT/Next Generation TOEFL Test
Integrated Writing Rubrics (Scoring Standards)

Score	Task Description
5	A response at this level successfully selects the important information from the lecture and coherently and accurately presents this information in relation to the relevant information presented in the reading. The response is well organized, and occasional language errors that are present do not result in inaccurate or imprecise presentation of content or connections.
4	A response at this level is generally good in selecting the important information from the lecture and in coherently and accurately presenting this information in relation to the relevant information in the reading, but it may have minor omission, inaccuracy, vagueness, or imprecision of some content from the lecture or in connection to points made in the reading. A response is also scored at this level if it has more frequent or noticeable minor language errors, as long as such usage and grammatical structures do not result in anything more than an occasional lapse of clarity or in the connection of ideas.
3	A response at this level contains some important information from the lecture and conveys some relevant connection to the reading, but it is marked by one or more of the following: • Although the overall response is definitely oriented to the task, it conveys only vague, global, unclear, or somewhat imprecise connection of the points made in the lecture to points made in the reading. • The response may omit one major key point made in the lecture. • Some key points made in the lecture or the reading, or connections between the two, may be incomplete, inaccurate, or imprecise. • Errors of usage and/or grammar may be more frequent or may result in noticeably vague expressions or obscured meanings in conveying ideas and connections.
2	A response at this level contains some relevant information from the lecture, but is marked by significant language difficulties or by significant omission or inaccuracy of important ideas from the lecture or in the connections between the lecture and the reading; a response at this level is marked by one or more of the following: • The response significantly misrepresents or completely omits the overall connection between the lecture and the reading. • The response significantly omits or significantly misrepresents important points made in the lecture. • The response contains language errors or expressions that largely obscure connections or meaning at key junctures, or that would likely obscure understanding of key ideas for a reader not already familiar with the reading and the lecture.
1	A response at this level is marked by one or more of the following: • The response provides little or no meaningful or relevant coherent content from the lecture. • The language level of the response is so low that it is difficult to derive meaning.
0	A response at this level merely copies sentences from the reading, rejects the topic or is otherwise not connected to the topic, is written in a foreign language, consists of keystroke characters, or is blank.

Directions: The Reading section measures your ability to understand academic passages written in English. You will read one passage and answer questions about it. In the actual *TOEFL iBT®* test, you would have 20 minutes to read the passage and answer the questions. Test takers with disabilities can request a time extension.

Meteorite Impact and Dinosaur Extinction

There is increasing evidence that the impacts of meteorites have had important effects on Earth, particularly in the field of biological evolution. Such impacts continue to pose a natural hazard to life on Earth. Twice in the twentieth century, large meteorite objects are known to have collided with Earth.

If an impact is large enough, it can disturb the environment of the entire Earth and cause an ecological catastrophe. The best-documented such impact took place 65 million years ago at the end of the Cretaceous period of geological history. This break in Earth's history is marked by a mass extinction, when as many as half the species on the planet became extinct. While there are a dozen or more mass extinctions in the geological record, the Cretaceous mass extinction has always intrigued paleontologists because it marks the end of the age of the dinosaurs. For tens of millions of years, those great creatures had flourished. Then, suddenly, they disappeared.

The body that impacted Earth at the end of the Cretaceous period was a meteorite with a mass of more than a trillion tons and a diameter of at least 10 kilometers. Scientists first identified this impact in 1980 from the worldwide layer of sediment deposited from the dust cloud that enveloped the planet after the impact. This sediment layer is enriched in the rare metal iridium and other elements that are relatively abundant in a meteorite but very rare in the crust of Earth. Even diluted by the terrestrial material excavated from the crater, this component of meteorites is easily identified. By 1990 geologists had located the impact site itself in the Yucatán region of Mexico. The crater, now deeply buried in sediment, was originally about 200 kilometers in diameter.

This impact released an enormous amount of energy, excavating a crater about twice as large as the lunar crater Tycho. The explosion lifted about 100 trillion tons of dust into the atmosphere, as can be determined by measuring the thickness of the sediment layer formed

If you don't so already, introduce your reasons for supportingÃ Âthis particular solution.Ã ÂTry to give specific details and examples for each reason you present. There is no reading passage for this question. Make sure to useÃ Âspecific examples. For both questions, you¢ÃÂÂll have 20 seconds to prepare your response and 60 seconds to speak. You¢ÃÂÂll then listen to a conversation between two speakers about their opinions on the campus situation. You may do this by slightly rephrasing the prompt. As you prepare, you¢ÃÂÂll already have a rough idea as to how you¢ÃÂÂre going to structure your response and where you intend to insert key transitions; therefore, you¢ÃÂÂll have more time to decide on the main points of your response and choose theÃ Âdetails you want to use. Task 5: Explain a Campus Life Problem (Campus Situations) And now we getÃ Âto the final two tasks! For question 5, you¢ÃÂÂll listen to an audio clip of a conversation between two students who will discuss a campus problem and offer possible solutions to it. Do not give your own examples or reasons. Examples One solution is to _____ , and another solution is to ¢ÃÂ¦Â The students offer two solutions: one is to _____ , and the other is to ¢ÃÂ¦Â One proposal the students have is to _____ , and the other is to ¢ÃÂ¦Â 3. In total, you¢ÃÂÂll have one minute for the task: 15 seconds to prepare your response and 45 seconds to speak. Then, if you happen to have an extra 5-10 seconds at the end of the task, feel free to conclude your response with aÃ Âbrief closing remark. The number of points you discuss will dependÃ Âon the lecture and prompt you get. But by using aÃ ÂTOEFL Speaking template, you can give yourself the skills and confidence you¢ÃÂÂll need to attainÃ Âthe Speaking score you want on test day. Now, let¢ÃÂÂs take a look at our TOEFL Speaking question 4 template. So with each point you offer, make sure youÃ Âexplain clearly what its benefits are and why it¢ÃÂÂs ultimately the better (Optional) You can complete your answer with a general summary of what you have already discussed. You have 45-50 seconds to read the ticket, 30 seconds to prepare your answer and 60 seconds to speak. Explain why this event brings back affected memories. The two independent tasks are punctuated on a scale of 0-4. For example, if your prompt asks to summarize a certain segment of the lecture, focus only on this part, not try to summarize the entire lecture! 2. Although their answers in the speaking section do not need to be almost structured as those of written section, you must be able to follow a progressive progress of ideas and clearly respond to Questions you are giving. (Optional) If you have time, present a third reason here. or even rest. Now explain one of the student's main points to support or oppose these changes. Examples first, ... for example, ... first, ... for example, ... for one, ... this is ... my first reason is that ... what I want say that ... always explain why in your answers. How can a toefl speech model help you? Examples The student agrees/disconcert with the changes/decision/proposal of the school by two/transactions. Your answer should summarize the solutions given and then indicate which solution you think better and why. Your prompt probably requires that you discuss how the lecture illustrates a particular academic concept; Therefore, make sure more, if you are not all of your examples directly from the lecture â € ”No reading passage. This is because of two / transactions. The truth is that in the conversation dIARIA, most people do not talk to the same as a vocabulary they use in writing. The clips are usually about 60 seconds. And I asked if he was okay. Our guide on how to access the TOEFL section Talk offers numerous tips and strategies to improve your English language ability. Task 1: Choose from multiple options (Family topics) For task 1, you will talk about a personal experience or desire and will have several options from which to choose. #1: Stick with simple words, easy to remember Have you forgotten a word in English or fought to pronounce one?the same format you used for points one and two, taking toÃ ÂvaryÃ Âyour transitions. According to the official rubric, a 4Ã Âresponse is intelligible, clear, and mostlyÃ Âgrammatical. Before we dive into our templates, what exactly is a TOEFL Speaking template? Essentially, TOEFL iBT Speaking templates offer you differentÃ Âways you can effectively layÃ Âout your ideas. Remember, this task revolves around your experiences and opinions, so it¢ÃÂÂs OK (and actually quite natural) to use ¢ÃÂÂI¢ÃÂÂ throughout your response. For question 2, you must choose one of two options and explain why. Next, introduce your second reason byÃ Âfollowing the same general structure used above for your first reason. Below, we discuss the basic differences between these two types of tasks. For this section, you must complete a total of six tasks, which deal with the following content areas: Familiar topics (tasks 1 and 2) Campus situations (tasks 3 and 5) Academic course content (tasks 4 and 6) With each task you¢ÃÂÂll read a promptÃ Âand getÃ Â15-30 secondsÃ Âto prepareÃ Âyour response. Follow the same structures as above for your first and second reasons but try to useÃ Âdifferent transitions. Independent Speaking The Independent Speaking tasks areÃ Âthe first two questions on the Speaking section, and both questions revolve exclusively aroundÃ Âfamiliar topics. For question 4, you must explain a concept from a passage and lecture. #1: Keeps Your Response Focused AÃ ÂTOEFL Speaking template structures your thoughts in a clear, focused manner. He had spent the entire night in the classroom working on a mathematics puzzle. Independent vs. You¢ÃÂÂll then have 20 seconds to prepare your response and 60 seconds to speak. Stick to two points if you can¢ÃÂÂt think of three. Task 6: Explain a Lecture (Academic Course Content) Question 6Ã Âis your final Integrated task as well as your final Speaking task overall. Never just introduce a point and then move on to the next one without first explaining why that particular It is relevant to your subject. Examples third, ... and finally, ... my last point is that ... 5. The teacher discusses _____ in the lecture, giving two/three examples.
